**Additional Information – Single Line Diagram**

In addition to the items listed above, please attach a detailed one-line diagram of the proposed facility, including all applicable elementary diagrams, major equipment (PV panels, wind turbines, generators, transformers, inverters, AC disconnect switch, optional DC disconnect switch, circuit breakers, protective relays, batteries and any other components that represent the balance of the system). Include manufacturer’s specifications, test reports and any other applicable drawings or documents necessary for the proper design of the interconnection. Also describe the address or grid coordinates of the facility.

**Permission to Interconnect**

**Customer must not operate their generating facility in parallel with Distributor’s system until they receive written authorization for parallel operation from Distributor.** Unauthorized parallel operation could result in injury to persons and /or damage to equipment and/or property for which the customer may be liable.

**Customer Signature**

I hereby certify that, to the best of my knowledge, the information provided herein is complete and accurate. I understand that the generation system cannot be operated in parallel with MLGW’s system until I have received written approval from MLGW, in the form of the executed Generation Partners Participation Agreement, after all inspections and reviews are completed. I understand that I may incur MLGW metering costs beyond the amount that TVA reimburses, as well as other costs for other interconnection components, and that I will be notified of any such costs before the project begins.
