MLGW’s 2019 Water Quality Table now online

Want to check out the facts about the source and quality of your drinking water? The 2019 Water Quality Table can be found on MLGW’s website at mlgw.com/waterquality. MLGW’s full annual Water Quality Report will be online on our website in May.

MLGW wear red for Cancer

In observance of National Women’s Cancer Awareness Day, MLGW employees in the Administration Building downtown wore red to work. They gathered in the lobby for a group shot as they do their best to raise cancer prevention and treatment awareness as well as empower women in the fight against the disease. Together, we can beat cancer!

MLGW addresses COVID-19

Early in March, immediately after the coronavirus was declared a pandemic, MLGW held a news conference to announce measures the Division would take to address the COVID-19 crisis, including suspending utility service cutoffs.

MLGW understands the worry and concern surrounding the novel coronavirus (COVID-19). Due to the pandemic restrictions and for the safety of customers and employees, the utility has closed public access to all MLGW Community Offices. Drive-thru windows will remain open for payments by cash, check, and money orders only. Customers using drive-thru services are encouraged to bring their bill with them to make processing payments faster. Drop boxes are available at all locations. Additionally, no cash payments can be put in drop boxes – only checks and money orders.

MLGW also encourages customers to use My Account as an option. My Account gives you 24/7 access to your account. You can review your bill, make payment arrangements and even report outages. It’s easier and faster (in most cases), especially considering call wait times may be longer than usual. If you haven’t enrolled in My Account, it only takes a few minutes. Go to mlgw.com or download our app.

Bill payment options change due to pandemic restrictions

Our President and CEO delivers Inaugural Address

At a recent MLGW Board of Commissioners meeting, MLGW President and CEO J.T. Young delivered the first-ever State of MLGW address. Young covered the changes and improvements of the past year, the accomplishments in the past year, the financial well-being of the Division, plans for the future and what the recent City Council approval of MLGW rate increases will allow for infrastructure improvements.

Young highlighted the MLGW Way, uplifting the values of compassionate service, safety, integrity, ownership and inclusion and ways employees met those objectives throughout 2019. He also discussed MLGW’s goals for 2020 and the accomplishments so far this year including:

- **New Substation 89 – First Quarter:** This new substation is located at Mendenhall and Shelby Drive and will serve roughly 8,000 customers. It will provide load relief for growth in the Hickory Hill and Shelby Drive and will serve new substation is located at Mendenhall and Shelby Drive and will serve.
- **Plan and execute the RFP leading to a final recommendation to the MLGW Board.**
- **MLGW Way Forward – Ongoing:** New efficiencies and savings of over $91 million have been incorporated into MLGW’s five-year service improvement plan.
- **Commencement of five-year Service Improvement Plan:** MLGW is moving forward with $1 billion for improvements to the Division’s system including tree trimming; substation and distribution equipment procurement and replacement; water and gas system upgrades; LED lighting deployments and additional underground upgrades; and more.

Prepare your system and yourself for the summer

Feeling comfortable during a hot and humid Memphis summer can be challenging, but it does not have to be costly. Here are some of the easiest ways to stay cool and save:

- **Set the thermostat at 78° degrees or higher for the most energy efficient operation.** Each degree below this setting can add up to six percent to your cooling costs.
- **Check your air conditioner’s filter every time you receive your utility bill.** Look for a dust build-up that can restrict the airflow and place stress on the system. This added stress causes wear and tear on the unit, and increases operation costs.
- **Always replace the filter cover.** By creating a tight seal around the filter opening, you can block any unconditioned air that is being pulled into the unit.
- **Use fans to move the air inside your home.** This gives the sensation that it is five degrees cooler than the actual temperature.
- **Keep your window and central units.** Check your air conditioner’s filter every time you receive your utility bill. Look for a dust build-up that can restrict the airflow and place stress on the system. This added stress causes wear and tear on the unit, and increases operation costs.
- **Pre-set the thermostat to adjust back from home for four hours or longer.** Use your programmable thermostat setting to automatically allow the temperature to increase at bedtime. Sleep under lightweight bedding and use fans during sleep.
- **Do not place lamps near your thermostat.** Do not set your thermostat at a colder setting than the actual temperature. Lamps increase the sensation that it is five degrees cooler than the actual temperature. Keep fans closed or add room-darkening shades to block out the heat from the sun.
- **Do not set your thermostat at a colder setting than normal when you turn on your air conditioner.** It will not cool your home any faster and could result in excessive cooling and, therefore, unnecessary expenses.
- **Use a programmable thermostat to allow the inside temperature to rise while you are away from home for four hours or longer.** Pre-set the thermostat to adjust back to your normal comfort range one half hour before returning home.
