

Annual Solar Power Generated by Green Power Providers Participants in Shelby County

Green Power Providers participants install onsite renewable generation (typically solar), interconnect to MLGW's electric system and sell 100% of the output to TVA under 20-year agreements, with generation credits applied to their monthly MLGW bills. This program closed to new applicants on 12/31/2019. Customers who submitted requests in fourth quarter 2019 will follow the necessary steps for MLGW/TVA application, installation, interconnection and acceptance testing so the generation capacity, shown as "Cumulative GPP kW installed by year-end." will increase in 2020. All existing Green Power Providers Participation Agreements will be honored for their entire duration.

If are a Green Power Providers participant and intend to move, please contact MLGW to transfer the remainder of your Participation Agreement to the new occupant.

For information about renewable generation options, visit www.mlgw.com/greenpower
